(1) They incorporate a microprocessor for Self-test operation.

The "Non maintained" models have remote control connection.

The "Maintained" models can be switched off mains on and they do NOT have remote control connection. If you add a T to the reference they will have remote control connection, but they will NOT be able to be switched off mains on.

The "Maintained" models provide 100lm output mains on.

Degree of protection: **IP43 IK04**

* Must be filled out the reference with the code of the emergency sign (previous page).

Autotest system

The Autotest luminaires incorporate a microprocessor that automatically verifies different parameters, making periodical tests:

- Functional test (every 30 days) that simulates a network malfunction and verifies the functioning of the light source.
- Autonomy test (every 3 months) that simulates a mains power fail and verifies that the autonomy provided is superior than nominal.

The results of these tests are communicated by a two-colour LED indicator light on the luminaire.

Luminaire status, bicolor LED

Green LED	Amber LED	Meaning	Action to be taken
●	○	Everything OK	None
● (slow)	○	Duration test in progress	None
● (fast)	○	Functional test in progress	None
○	● 1 pulse	Duration failure	Change battery + 72 h
○	● 2 pulses	Lamp failure	Change lamp + 48 h Repair luminaire VDC
○	● 3 pulses	Battery does not charge	Check battery or repair luminaire
○	● 4 pulses	Electronics failure	Repair luminaire
○	●	Low battery voltage	Check battery or repair luminaire

On: ● / ●

Stopping: ○ / ●

Blinking: ● / ●

Configuration of the Test using a remote control

By connecting a remote control (50 TE) to luminaires with connection for this device, you can control the following functions:

- Manual functional test using the button on the Remote control.
- Manual autonomy test using the button on the Remote control.
- Definition of the time set for the automatic tests.

Technical characteristics:

• D-eco / eco / eco-es • VDC

- Self-contained with rest mode, non-maintained and maintained.
- Suitable for positioning on generally inflammable surfaces.
- Class II .
- Rechargeable watertight accumulators of Ni-Mh in the Self-test models.
- Rechargeable watertight accumulators of Ni-Cd at high temperatures.
- Rechargeable watertight accumulators of LiFePO₄ at high temperatures, pulse-load that permits a major reduction in energy consumption.
- Battery charge time: 24 hours.
- Protection against excessive battery discharge.
- Protection against overcurrent.
- Switches to the emergency status when the voltage drops to 70% of the nominal value.
- Indication of presence of power and of battery charge, with high-luminosity, long-life LED.
- Start/stop buttons on the front screen.
- Optional remote control. Suitable for use in rail DIN 46277/3, EN 50022 in electric panels, occupying the width of 4 standard circuit breakers.
- Enables simulation of mains power failure.
- Surface mounted in walls and ceilings, flush mounted, recessed mounted and suspended.
- Box for recessed and flush-mounting of quick fixing without screws.
- All the references are fitted with a fixing plate that makes installation quicker and easier.
- Four possible cable inputs, three sides for pipes and one in the back.
- Terminals with possibility of connection for cables of up to 2 x 2.5 mm² per pole, except in VDC of up to 2 x 1,5 mm² per pole.

Complies with standards

EN 60598-2-22
 EN 55015
 EN 61000-3-2
 EN 61547
 EN 62034

Compliant with the Guidelines on Low Voltage 2014/35/EU, Electromagnetic Compatibility 2014/30/EU, 2002/96/EC  and RoHS 2011/65/EU.

LED as a source of light

The use of LED technology as a source of light enables us to optimise the photometric curve, increasing the light output of the light fitting.

The high tolerance of LEDs to the number of switch-ons and their long useful life provide of a light source that is "maintenance free".

Product development characterized by the accomplishment of the following requirements:

- **Installation costs and electricity consumption savings: use of cool technology.**

Quick-fix connection system employing a base plate for easy installation.

Charging system based on low-heat capacitive impedance which increases the power of the installation, saving electricity costs.

- **Durability, long life: manufactured with first-class materials.**

Synthetic material which complies with the European normative EN-60598-2-22 relating to the glow wire test 850°

Top brand fluorescent lamps guaranteeing a long life.

- **SELF-TEST mode operation**

The lights incorporate a microprocessor that verifies the battery status and light source, informing of the result with a LED indicator light LED in the luminaire itself.

- **Aesthetic image: Wide range of models with various fitting options**

Surface mounted in walls and ceilings, flush mounted, recessed mounted and suspended.

Various finishing trims.

Watertight protection for Series eco-esLD.

Compact dimensions adapting to any environment.

- **Environmentally friendly: Developed and manufactured following the EcoDesign criteria.**

Halogen free printed circuits.

Low-weight due to absence of input transformer.

Less consumption and automatic power factor correction due to its "cool technology".

Duisa was founded in 1999 focusing its activities on the development of new products in the emergency lighting and signalling sector.

Duisa focusses on the innovation and quality and this has allowed it to contribute to the creation of competitive technical solutions for a more and more demanding market, like the emergency lighting which involves people's safety. From the beginning, Duisa has been principally characterized by its vocation for exporting, providing the necessary means to the adaptation to the new needs and demands of the market. At the moment it operates in different countries all around the world.
